RE: GD Corrosion Resistance Testing

Dear Dennis & Tom,

Our test data showed that the steel part after primer and top coat with your Nano-Clear NCI product has no sign of corrosion after 4193 hrs. This is very unusual for steel parts to pass 4000 hrs based on my past experiences with coatings. For Aluminum / Titanium joints, no sign of corrosion after 4193 hrs, indicates that this coating is well suited for dissimilar metal joint protection.

I would recommend sharing this data with ARL (Army Research Laboratory) and further evaluation through ARL. The Aluminum / Magnesium tests we are performing will also provide more information after we are done - so more supporting information will be available later.

Thank you for your support.
